

Weather Advisory: Know Before You Go

Strong rain and hurricane advisories are targeting our coastline this weekend.

Stay Safe this weekend with our checklist:

1) Stay out of the water for 72 hours after rainfall. Rainfall will bring accumulated pollution to our waterways and shores.

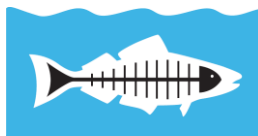

2) Tune into local news stations to keep up-to-date on changing weather conditions and road closures.

3) Know before you go. Check out the local water quality grades at beachreportcard.org or the River Report Card at <https://healthebay.org/riverreportcard/>.

4) Check the local forecast, including tide levels! Don't get washed away! We use: NOAA Local Tides and Currents.

5) Join the Storm Response Team. Once conditions are safe, learn about how you can lead your own storm response cleanup:
